

> create app favewits↵

App endpoint: https://favewits-api.apigee.com  
[APP FAVEWITS CREATED]

> favewits add provider twitter↵

Twitter uses OAuth 1.0a. You will need the Consumer Key and Consumer Secret that Twitter provides for your app, see: <http://dev.twitter.com/applications>

Consumer Key: 89aoi8a9a98↵

Consumer Secret: aio89ai8ad89a092↵

Consumer Key and Secret added to app "favewits" for provider "twitter".  
Users can now be authenticated with twitter.

[TWITTER ADDED TO FAVEWITS]

> favewits add user↵

A user needs a unique name (email address ok) and a password, which will map to a SmartKey. You'll use a SmartKey to authorize all API calls on behalf of a user.

Username: marsh@earth2marsh.com↵
